- 600-800 fills/hour

Information:

The model S-6 cascading weigh filler is designed to fill harder to run products such as crackers, chips and other non-free-flowing products. A very accurate and easy to use control system monitors the product depth in the lower pan allowing for consistent filling. The S-6 utilizes many of the same systems found on our S-4, including the **Logical Controller II**, for reliable, hassle free operation.
